

Crystal-clear view with REMIS

Tested by an independent institute for maximum
water vapour and gas tightness as per DIN EN 1279

Perfect combination: REMIS glass spacer for ideal goods presentation and cooling

Advantages at a glance

- Permanent, maximum transparency with the REMIS glass spacer
- Very high insulation values (Ug value up to 0.9 W/m²K)
- No gas loss, thus preventing condensation from forming in the space between the panes
- Very high resistance to the chemicals in cleaning products
- No air pockets and no magnifying effect as with traditional plastic spacers
- High DIN 12600-compliant impact resistance

REMIS glass spacers compared to traditional plastic spacers

Very high insulation values over the whole service life

- Tested by an independent institute for maximum water vapour and gas tightness as per DIN EN 1279
- 100% gastight (gas and water vapour)
- Minimised condensation on external panes

Permanent, maximum transparency

- Very long service life
- No yellowing
- Permanent clear view
- High scratch-resistance

High impact resistance

- REMIglas doors have successfully passed the following tests:
 - Crash test with a 100-kg shopping trolley at a speed of 7 km/h from different impact angles
 - Endurance tests with 500,000 opening cycles
 - Standard mechanical resistance tests

A worldwide patent application has been filed for transparent spacer
and already issue in: USA, China, Australia, Japan, Canada and Mexico*
